

## On Premise Infosheet

K3|dataswitch's **On Premise** solution provides organisations with an integration platform from within their existing local IT estate

## INTEGRATION BY DESIGN

k3|dataswitch provides a single platform from which multiple system integration use cases can be achieved.

Either integrated to **your core ERP** solution or directly between each other.

FROM DISPARATE DATA TO ACCURATE INSIGHT, VALUE DELIVERED.

### API

In-built support for API based integrations as standard for modern systems

### FILE

Our file processing engine caters for file-based integrations making light work of EDI use cases

### DATABASE

Data integration is an easy to adopt process with connectivity to Microsoft SQL Server or SAP SQL Anywhere

## User Experience

Customisable **dashboards** provide real time insights to monitor your integrations

Object **drag & drop** allows a visual integration process to be realised in an easy to use and understand interface

## Data Management

The integrated **process manager**, allows operators to **view, modify & change** data at every step of the process

Should you choose to retain history, you can even go back and view data from any point in time

Full **auditing** provides administrators the ability to track changes throughout thereby increasing supportability

## System Architecture

Virtual service architecture provides the ability to load balance or dedicate integration revisions between **production, UAT and development**
